1 point

	Data source types Data center types	
	O Data was data	
	O Data models	
2.	Hadoop, MongoDB, and BigTable are all examples of which data source type?	1 point
	O Data warehouses O File Shares	
	Big data databases	
	O Distributed databases	
3.	Data that has been organized into a formatted repository, typically a database, so its elements can be made	1 point
	addressable, is an example of which data model type? Semi-structured data	
	O Structureless data	
	Structured data Unstructured data	
4.	Which of the following is the primary difference between a flat file database and a relational database?	1 point
	 All the data in a flat file database is stored in a single table. Flat file databases consist of a table that references internally stored files. 	
	Flat file databases consist of a table that references externally stored files.	
	All the data in a relational database is stored in a single table.	
5.	In the video Securing the Crown Jewels, the "Real-Time Monitor & Protection" phase contains which three (3) of	1 point
	the following items? Activity Monitoring	
	✓ Blocking & Quarantine	
	✓ Dynamic Data Masking ☐ Vulnerability Assessment	
	Reconfigure, Mask & Encrypt	
6	In the video Leveraging <i>Security Industry Best Practices</i> , where would you turn to look for help on establishing	
0.	security benchmarks for your database?	1 point
	Common Vulnerability and Exposures (CVE). Center for Internet Security (CIS).	
	Central Intelligence Agency (CIA).	
	O Department of Defense/Defence Information Systems Agency (DoD/DISA).	
7.	Most of the time, how do users access data?	1 point
	Through a database client.	
	Through an application. Directly from a database.	
	O Directly from a hardened repository.	
8.	True or False: In a vulnerability assessment test, it is not uncommon to fail more than 50% of the tests before the operating system and database are hardened.	1 point
	TrueFalse	
	O raise	
9.	Which of these hosting environments requires the service provider to manage the largest number of different data sources?	1 point
	On Premises	
	O PaaS O laaS	
	○ SaaS	
10	• While data security is an ongoing process, what is the correct order to consider these steps?	1 point

True or False: Data monitoring products such as IBM Guarduim are fully capable of blocking access to sensitive data based upon access parameters configured in policy rules. True False In which two (2) ways can security events collected by a data monitoring tool be logged to a security incident and event management (ISEM) system? Configure bidirectional communication between the monitoring and SIEM systems, if available. Configure your SIEM system to read the monitoring systems local systog file. Sepont security events from your monitoring tool and import them into your SIEM tool. Configure the monitoring tools such as IBM Guarduim are designed to monitor activities within a database, but element products, such as a privileged identity management (PIM) tool would be required to monitor changes to the data monitoring tool such as IBM Guarduim are designed to monitor activities within a database, but element products, such as a privileged identity management (PIM) tool would be required to monitor changes to the data monitoring tool such as IBM Guarduim are designed to monitor activities within a database, but element products, such as a privileged identity management (PIM) tool would be required to monitor changes to the data monitoring tool such as the addition of new users or the alteration of existing user accounts. True or False: In the IBM Guarduim data monitoring tool in it is possible to create a report that shows not only how many SQL unauthorized access attempts were made by an individual, but also exactly which SQL statements were	1 point 1 point 1 point
12.	Raise the Bar, Identification & Bascline, Real-time Monitor & Protection Mentification & Bascline, Raise the Bar, Real-time Monitor & Protection Real-time Monitor & Protection, Identification & Bascline, Raise the Bar To automatically terminate a session if an attempt is made to access data in a sensitive table, such as Social Security (SSN) ID numbers, you would set up which type of rule? An Access rule. An Access rule. An Access rule. An Exception rule. An Exception rule. An Exception rule. True or False: Data monitoring products such as IBM Guardulim are fully capable of blocking access to sensitive data based upon access paremeters configured in policy rules. True False In which two (Z) ways can security events collected by a data monitoring tool be logged to a security incident and event management (SIEM) system? Configure bidirectional communication between the monitoring and SIEM systems, if available. Configure bidirectional communication between the monitoring asystems local system; if available. Configure your SIEM system to read the monitoring systems local system; if available. Configure the monitoring system to write to the SIEM systems system; if available. Configure the monitoring system to write to the SIEM systems system; if available. Configure the monitoring system to write to the SIEM systems system; if available is the data monitoring tool itself, such as the addition of new users or the alteration of existing user accounts. True or False: In the IBM Guardium data monitoring tool, it is possible to create a report that shows not only how many SQL unauthorized access attempts were made by an individual, but also exactly which SQL statements were diallowed. True False Altermpts are made to SELECT lists of usernames and passwords by a non-administrator account. Data accessed by an accounting application dramatically increases in the last few days of every month. A known user attempts to run invalid SQL statements against data his ID is authorized to access. A user rou	1 point 1 point 1 point

1. Distributed databases, data warehouses, big data, and File shares are all classified as what?
